A DATA MANAGER'S GUIDE FOR
AVOIDING EDC PRICING MISTAKES

Choosing an Electronic Data Capture (EDC) vendor should be as simple as choosing which features you would like in your EDC system. Some systems may be reasonably priced, but once you get the first bill you might be shocked by how much *small fees* can amount to. This 1-page guide is designed to give Data Managers insight on what fees they should watch out for when shopping for an EDC system. Shop wisely by not falling victim to EDC pricing mistakes! Read on to learn more...

1. SUPPORT COSTS

One of the biggest mistakes Data Managers make when shopping for an EDC is underestimating the number of support hours needed. If an EDC vendor charges by the hour, this can add up fast! Choose a vendor - like ClinCapture - that offers a free 24/7 support program.

2. TRAINING COSTS

Another big mistake is underestimating the cost of training. Training costs are common among EDC vendors and can be VERY expensive. Try going with a vendor with more affordable training or free training, if possible. ClinCapture offers 100% free training, SOPs, and a certification course.

3. START-UP COSTS

Upfront start-up costs can be VERY expensive. Try finding an EDC vendor that has a pay-as-you-go model!
